ABSTRACTED-PUB-NO: EP 517569A

BASIC-ABSTRACT:

Fungicidal compsns. comprise a copper tallate (I), a terpenic solvent (II) contg. terpenic alcohols and having a b.pt. between 150 and 220 deg.C and opt. one or more emulsifiers.

The tall oil acids from which (I) is prepd. pref. comprise 20-80% resinic acids (esp. 30-55%) the remainder being oleic, linoleic etc. acids. The solvent (II) is a mixt. of terpenic alcohols and hydrocarbons, pref. at least 50% being alcohols. The proportions of the various components in the compsn. are 40-80% (I), 15-50% (II) and 5-15% emulsifiers. The compsns. are prepd. by reacting copper oxide or hydroxide with a mixt. of resinic acids and fatty acids in a terpenic solvent at 120-160 deg.C, in the presence of a 1-6C acid as catalyst.

USE/ADVANTAGE - Treatment of plants esp. vines and cellulosic materials to prevent fungal attack. The compsns. are self-emulsifiable and show far less phytotoxicity than known copper tallate compsnThe

AB Industrial **copper** concs. contg. sulfides of Cu and other metals,
which are stored as a 66% aq. **suspension** at 5.degree., undergo
chem. transformations, which influence the subsequent removal of Pb-contg.
minerals by addnl. flotation in the presence of dextrin as a depressant, K
Et xanthate as a collector, and **terpineol** as a frother. The
relationship of the selectivity of sepn. with the aging time is shown.
The Fuerstenau selectivity index, defined as the recovery of Cu in the
conc. equal to the recovery of Pb in tailings, decreases linearly with the
aging time. The selectivity index is about 70/70 for a fresh conc. and it
is reduced to 50/50 (lack of sepn.) after about 35 days of aging.

NOVELTY - Fungicidal fertilizer compositions (I), comprise 1 - 5 %
(calculated as copper) of a copper salt or hydroxide, together with a
mixture of amino acids and an alkaline reactant.
DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for the
preparation of (I).
ACTIVITY - Plant antifungal; Fertilizer.
A fertilizer containing 5 % **copper** was prepared containing
mixed amino acids (52 %), red algae alkaline extracts (19 %),
copper hydroxide (9 %), **suspension** of alkaline clay (20
%).
Vines were sprayed at 4 and 12 liters/ha, 5 treatments being given at
6 - 12 day intervals.
The percentage of leaves attacked by mildew were as follows:
untreated controls - 52.5 %; sprayed at 4 liters/ha - 25 % and sprayed at
12 liters/ha - 7.5 %.
MECHANISM OF ACTION - None given in the source material.
USE - (I) are used as plant fungicide or fertilizer, useful against a
range of cryptogamic disorders, especially suitable for the treatment of
potatoes or grape vines.
Dwg.0/0

TECH UPTX: 20021212
TECHNOLOGY FOCUS - AGRICULTURE - Preferred compositions: (I) contain (%):
copper hydroxide (9), amino acid mixture (51 - 70), and alkali (30
- 40), amino acid mixture and alkali.
The amino acid mixture contains glycine, alanine, proline, lysine,
arginine, aspartate, glutamate, and hydroxy proline, and the alkali is
potassium hydroxide or carbonate.
The fertilizer may further contain marine algae extracts, alkaline clays,
surface-active and odor-reducing resins, and pine **terpene** or
rosin soaps.
TECHNOLOGY FOCUS - ORGANIC CHEMISTRY - Preparation: Preparation of (I),
comprises:
(i) treating an amino acid mixture thermally and/or by ionization
(gamma-radiation), and/or by treatment with an alkali and stirring until
its pH is 10 or more;

(ii) allowing the mixture to stand for a few minutes; and
(iii) adding copper hydroxide and homogenizing the mixture until the blue color that forms changes to a mauve-violet color, indicating the formation of useful complexes.

TI Plant protectant composition for controlling fungal and bacterial infections, e.g. vine mildew, comprising aqueous **suspension** containing **copper** compound and a **terpene** derivative to improve activity.

AB WO 200024259 A UPAB: 20000630

NOVELTY - A plant protectant, fungicidal, bactericidal or bacteriostatic composition (A) comprises a **suspension** of at least one **copper** compound (I) in an aqueous emulsion of at least one **terpene** derivative (II). (I) is an oxide, hydroxide or mineral acid salt of **copper**.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for:

(i) the preparation of (A);

(ii) the use of (II) for improving the effect of (I) in plant protectant (specifically fungicidal, bactericidal or bacteriostatic) compositions; and

(iii) a method for treating plants using (A).

ACTIVITY - Antifungicidal; antibacterial; synergist.

MECHANISM OF ACTION - None given.

USE - For protecting plants against fungal infections (e.g. vine mildew, *Plasmopara viticola*) and bacterial infections (e.g. bacterial wilt of peach and apricot trees and *Pseudomonas bacteriosis* of apple and pear trees).

ADVANTAGE - (II) potentiates the antimicrobial activity of (I), so that (I) can be used at lower dosages to reduce harmful or phytotoxic effects in the treated plants. In tests in vines artificially infected with *Plasmopara viticola*, treatment with copper at 2050 g/ha (as the hydroxide) plus pine oil at 650 g/ha reduced the level of damaged leaves

to 22.50 %, compared with 36.25 % for treatment with 2030 g/ha of copper alone.

Dwg.0/0

TECH

UPTX: 20000630

TECHNOLOGY FOCUS - AGRICULTURE - Preferred Components: (I) is **copper** oxychloride, **copper** carbonate, **cuprous** oxide or preferably **copper** hydroxide. (II) consists of monoterpene(s), preferably **terpene** hydrocarbons (or their oxidized derivatives), alcohols, aldehydes and/or ketones, especially a mixture of **terpene** hydrocarbons and alcohols. (II) is particularly in the form of an essential oil, specifically pine oil (preferably containing 90 % **terpene** alcohols). Preferred Composition: (A) contains (I) at 200-600 g/l (specifically in the form of particles of diameter 6 μ m or less) and (II) at 50-400 (preferably 80-200) g/l. (A) further contains surfactant(s), preferably at 20-100 g/l and specifically selected from ethoxylated fatty acids or alcohols, calcium alkylbenzenesulfonate, alkyl naphthalene-sulfonates, ethoxylated alkyl (specifically dodecyl or octyl) phenols, sequenced ethylene oxide/propylene oxide or propylene oxide/ethylene oxide copolymers, mono- or di-(isopropyl, methyl or n-butyl)-naphthalene sulfonates, ethoxylated dodecylphenols, sodium dodecylbenzenesulfonate, phosphoric esters of alkyl polyethers or of ethoxylated (poly)aryl phenols (as acids and/or salts), ethoxylated castor oil, lignosulfonates, methyl dinaphthalenesulfonates, phenylsulfonates, polyalkyl naphthylmethanesulfonates, polyacrylates, ethoxylated polyaryl phenols, polycarboxylates, polyvinyl pyrrolidone (or derivatives), sulfonated cresol-formaldehyde or naphthalene sulfonic acid condensate salts, acrylic acid-acrylate ester, maleic acid-olefin or maleic anhydride-isobutene copolymer salts, ethoxylated alkyl- or polyaryl-phenol sulfates, sulfosuccinates, taurates and ethoxylated tristyril-phenols. Preparation: The claimed preparation of (A) involves micronizing (I) and the other components of the composition to give a stable, homogeneous suspension of particle size below 6 μ m. Alternatively (I) of particle size below 6 μ m is mixed with the other components.

TECHNOLOGY FOCUS - POLYMERS - Preferred Materials: Preferred surfactant additives in (A) include ethoxylated fatty acids or alcohols, ethoxylated alkyl (specifically dodecyl or octyl) phenols, sequenced ethylene oxide/propylene oxide or propylene oxide/ethylene oxide copolymers, ethoxylated dodecylphenols, phosphoric esters of alkyl polyethers or of ethoxylated (poly)aryl phenols, ethoxylated castor oil, polyacrylates, ethoxylated polyaryl phenols, polycarboxylates, polyvinyl pyrrolidone (or derivatives), sulfonated cresol-formaldehyde or naphthalene sulfonic acid condensate salts, acrylic acid-acrylate ester, maleic acid-olefin or maleic anhydride-isobutene copolymer salts, ethoxylated alkyl- or polyaryl-phenol sulfates and ethoxylated tristyril-phenols.

The following are claimed: (A) a compsn. having improved herbicidal and/or algaecidal properties consists of an aq. emulsion contg. an herbicidally and/or algaecidally effective amt. of a **copper** complex and 5-70 wt% of an adjuvant surfactant; (B) a method of controlling the growth algae and/or plants comprising bringing into contact with the algae and/or plants an aq. **suspension** of a **copper** complex, 5-50 wt% d,l-**limonene** and an emulsifying agent and (C) an environmentally acceptable carrier compsn for formulating emulsions of aq. solns. of **copper** coordination complexes comprising a mixt. of surfactants obtd. from admixt. of a) an emulsifier, b) a stabilising proportion of a non-ionic solvent for the **copper** coordination complex, and c) a surface-tension reducing proportion of a wetting agent.

Pref. the adjuvant is a **terpene**, pref. **limonene**.

The emulsion comprises 1 wt% of elemental **copper**. The **copper** complex comprises triethanolamine and monoethanolamine as chelating agents. The emulsion contains 1 wt% of emulsifying agent. The emulsifier comprises an anionic surfactant, pref. a tall oil fatty acid. The non-ionic solvent is an alkanolamine, pref. triethanolamine.

USE - The compsn. enhances delivery of copper ions to plant cells and is a rapid acting carrier formulation, partic. useful in flowing water systems.

AB Five coumarins were found to be produced as phytoalexins (stress metabolites) from the fresh young leaves of *Corchorus olitorius* plant, in response to inoculation with biotic stress agent, such as the spore **suspension** of the fungus *Helminthosporium turcicum* and with chemical stress agents, such as aqueous solutions of mercuric chloride and **cupric** chloride. The 5 compounds were isolated, purified and subjected to melting point and spectroscopic determinations. They were identified as scopoletin, fraxinol, isopimpinellin, xanthotoxol and peucedanol. They were tested for their antimicrobial activities. The volatile components of the natural fresh leaves and the **cupric** chloride-treated leaves were prepared and subjected to gas chromatography-mass spectrometry (GC-MS) analysis. 55 and 49 components were identified in the control and treated leaves, respectively, cis-3-Hexen-1-ol, cis-4-hexen-1-ol, **terpinolene**, sabinene and phytol were the major compounds in the control leaves, whereas those of the treated leaves were cis-4-hexen-1-ol, cis-3-hexen-1-ol, tetradecanal and phytol. The percentage of the total oxygenated compounds were increased in the **cupric** chloride-treated leaves much more than the control leaves (77.3 and 47.4%, respectively).

TI Plant protectant composition for controlling fungal and bacterial infections, e.g. vine mildew, comprising aqueous **suspension** containing **copper** compound and a **terpene** derivative to improve activity.

AB A plant protectant, fungicidal, bactericidal or bacteriostatic composition, comprising a **suspension** of at least one **copper** compound (I), e.g. an oxide, hydroxide or mineral acid salt of **copper**, in an aqueous emulsion of at least one **terpene** derivative (II), is claimed. Five formulations are presented, containing 36.76-43.55% **copper**-hydroxide, formulated with e.g. pine-oil (90% **terpenic** alcohols), arylphenoxy-peg-phosphate triethanolamine, sodium salt of a sulfonated cresol-formaldehyde condensate, ethylene-glycol, glycerol, xanthan-gum heteropolysaccharide, urea, Tensiofix-BCZ (alcohol sulfate), Tensiofix-LX (lignosulfonate), Tensiofix-D40 (cationic/non-ionic surfactant), silicone antifoamer and Baragel-24, made up with water. In antifungal bioassays, the new formulations gave better control of *Plasmopara viticola* on young vines than standard WP and SC formulations.
